

HOW TO CHOOSE YOUR HARD HAT

BASED ON BRIM

1

The biggest difference between Condor hard hats are the brim sizes. While you can't go wrong with either (and both offer tremendous protection), there are slight differences between the full brim and front brim. With full brim hard hats, where the brim encircles the entire hat all the way around, you are offered increased sun protection for your neck and ears. Front brim hard hats are perfect for when the main concern is protecting the head while using the least bulk possible.

DETERMINE SUSPENSION

2

The type of suspension your hard hat has may be important to you. Condor hard hats come in two different types: ratchet and pinlock. The difference between the two lies in the way they tighten. Pinlock suspension snaps into place, while ratchet suspensions tighten by turning a knob at the back of the head.

COLOR PREFERENCE

3

Color is another determining factor to choosing your hard hat. Many road construction workers prefer orange, as orange is common for traffic signs. Construction is famous for showcasing the classic yellow hard hat, however this is constantly changing. As brand recognition becomes more popular, white is often a common choice to better show company logos that can be printed on hard hats. Personal preference can also come into play, too, with enough colors available to simply choose your favorite.
